

EEZI-HEAT SMART PANEL

SETTING UP INSTRUCTIONS

1. Download the Ewe-Link app
2. Register the app on smart phone.
3. Login on the app using registered details and password and click on the add or + to add your device
4. Plug panel in and switch on the red switch will illuminate but the panel itself will not heat up.
5. The small pale blue light on the wifi module will be blinking 3 times continuously; ie 2 short 1 long it is now in set up mode.
6. Follow instructions on the app.
7. Try quick pairing first.
8. If this does not connect try the compatibility mode follow instructions on app but be careful there are 2 speeds to the flashing blue light and it is the faster one you want. You achieve this by pressing the black button on the wifi module and holding it down.
9. If this doesn't work look at your router as the wifi controller only works on 2.4Ghz. On the BT router I adjusted the mode switch on the wireless settings to mode 3 for it to work.
